

Cloud Finder!

This activity is a great way for kids to learn about cloud identification and classification through first hand exploration!

We encourage each camper to assemble their own hand-held cloud window using the adhesive craft stick and then, with adult permission, head outside to explore the skies!

Directions

For best results, print on white cardstock or thick paper. Cut along the outside of the frame and then remove the inner white box to create a window. Attach a popsicle stick for a handle and then head outside!
